

**KNOW THROMBOSIS!**

TOGETHER, WE CAN ELEVATE  
AWARENESS OF THROMBOSIS.

# WHAT IS THROMBOSIS?

Thrombosis is the formation of a blood clot in a blood vessel. The vessel may be any vein or artery as for example, in a deep vein thrombosis (venous) or a coronary artery (arterial). The clot itself is termed a thrombus.

**When a clot forms in a leg or arm vein, it is known as deep vein thrombosis (DVT). If the clot moves to the lungs, it is called pulmonary embolism (PE).**

**DVT + PE = VTE, a dangerous and potentially deadly condition.**

**Review the risk factors. Know the signs and systems. Seek immediate medical attention if you have concerns. Learn more at [isth.org](http://isth.org).**
